

Software - Collection of programs and documentation
Program - Set of instructions.

In windows, kernel and shell are distinguishable.

Linux → Bourne again shell (Bash)

\$ - user
- superuser

Recommended Books
UNIX concepts - S-Das

\$ date \$ date % %h

\$ cal % 2018

\$ cal

\$ cal % % 2018

\$ cal % June % 2018
Jun

Free → not in terms of cost

Free to use.

open source - Free to use, but source code at a price.

\$ pwd

\$ man

\$ date --help

\$ man % man

\$ a=5

\$ echo \$a

\$ echo "My % name % % is % Akman" → with exact spaces

\$ echo My % name % % is % Akman → squeeze multiple spaces to one.

\$bc → basic calculator

5 + 7

12

sqrt(25)

5

5/2

2

] → integer div

scale = 2 → to do floating pt. div

5/2

2.50

ibase = 16

15

←

F

ibase = 2

1111 ←

F

id → to eval

\$ who ←

\$ whoami

File - File is a container that contains information.

Folder - Logical subdivision of hard disk space.

Drive - Physical subdivision of hard disk space.

\$ mkdir abc ←

\$ cd \$ abc

\$ rmdir \$ abc ←

\$ cd ..

\$ cd / ←

\$ tree ←

\$ cat file.txt ← → catalogue] → 24 lines

\$ cat file.txt | more ←

\$ echo "Today is" data ←

\$ cat > file ←

↳ redirection command

Σ save

\$ cat >> file <
 ↳ appends

\$ cat abc pqr xyz <
 \$ touch file < → touching an existing file changes last modified time

\$ ls <

\$ ls -l <

\$ cp abc xyz <
 src dst

\$ mv abc xyz < ↳ rename

\$ rm abc

Unix is highly case sensitive, unlike windows.

\$ wc abc.txt < word count
 no. of words lines char

\$ wc -c

wc -w

wc -l

Program - textual

Process - Executable

\$ who | wc -l <

\$ ls -l | wc -l <

File privileges → 9 byte data

rwx/rwx/rwx → user
 group other

- /rwx/rwx/rwx →
 & /rwx/rwx/rwx →

& /rwx/rwx/rwx → can search (not executable)

\$ chmod u+a g+a o+a abc.txt

\$ chmod otw abc.txt → to give permission

-w abc.txt → to take away

Octal method

a = 4

w = 2

x = 1

chmod 764 file

chmod 777 file → all permission
