#	Deadlock recovery Sbort ou deadlock processes		
	1		
	ALAK.	u mujor -	Deal our Loans at a Line
	· Resplece of	xeemption	. Abort one process at a time
	· Resource	reemption	-until the deadlock sycle is
	· Resource	reemption	abort one process at a time tentil the deadlock cycle is broken.
	Resource freen	neemption prion - We nicen	broken.
	Resource freen from processe	prion - We niceons and give these is	broken. n'vely preempt some resources enouces to other processes
	Resource freew from processe until the d	prion - We niceons and gring these is le	broken. n'vely preempt some resources esources to other processes
	Resource freew from processe until the d	prion - We niceons and give these is lo	broken. n'vely preempt some resources exources to other processes when
	Resoluce preen prou processe until the d Thee issues	prion - We niceon s and give these is le with sevouce for victim - which is	broken. n'vely preempt some resources esources to other processes when elemphon:
	Resolute freew from process until the de There issues 1) select a are to	prion - We niceon s and give these a readlock upole is to with sevoluce for viction - which a be becompted	broken. n'vely preempt some resources esources to other processes when esources and which processes we also need to determine
	Resource preen prou processe until the de Three issues 1) select a are to grader of	prion - We niceon s and give these is le with severe purion is le viction - which is be breempted to be preempted to	broken. n'vely preempt some resources esources to other processes where ecources and which processes we also need to determine minimize upt:
	Resource presure process from process until the description of Rollback	prion - We niceon s and give there is to with resoluce for which is to be becompted freemption to	broken. n'vely preempt some resources esources to other processes token esources and which processes we also need to determine minimize cost: t a resource from a process
	Resource pream from process until the d There issues 1) select a are to sider of 2) Rollback what m	prion - We nicents and give there is le with resource for which is be breenfeld freemphion to hould be done in	broken. n'vely preempt some resources esources to other processes token ecources and which processes we also need to determine minimize cost: t a resource from a process, with that process?
	Resolute free preum from processe until the de Three issues 1) select a are to gran of 2) Rollback what or simplist	prion - We niceon s and give there is to eadlock upole is to with resource for within - which is to be preempted preemption to - If we freemphould be done in rolution is a to	broken. n'vely preempt some resources esources to other processes token esources and which processes we also need to determine minimize cost: t a resource from a process
	Resolute preau from process until the d Thee issues 1) select a are to sider of 2) Rollback what of Simplest process	prion - We nicents and give there is le with resource for which is be breempted freemption to freemption to and restart it	broken. n'vely preempt some resources esources to other processes token econocies and which processes? We also need to determine minimize cost: t a resource from a process, with that process?
	Resolute preau from process until the d Thee issues 1) select a are to sider of 2) Rollback what of Simplest process 5) Stawas	prion - We nicent a and restart it	while the deadlock sycle is broken. n'vely preempt some resources esources to other processes token emphises: esources and which processes? We also need to determine minimize rost: t a resource from a process, with that process? otal remoders: about the
	Resoluce preen prom processe preen processe proc	prion - We nicents and give these is les becompted freemprion to freemprion to and gestart it	broken. n'vely preempt some resources esources to other processes when esources and which processes? We also need to determine minimize cost: t a resource from a process, with that process? otal sellectes: about the
	Resource pream from process until the d There issues 1) select a are to sider of 2) Rouback what or simplist process 5) Garran gell ne	prion - We nicented and preemption to be becompted freemption to and restart it in - How do we start is how a start is how a	broken. n'vely preempt some resources esources to other processes token econocies and which processes? We also need to determine minimize cost: t a resource from a process, with that process?
